

CAPABILITY STATEMENT

Proaxis Solutions (Pty) Ltd

Version: 1.0
Date: June 2026
Use: Tender submissions, supplier onboarding, client proposals

COMPANY OVERVIEW

Field	Detail
Company	Proaxis Solutions (Pty) Ltd
Registration	2025/542019/07
SARS Tax Reference	9007193338
B-BBEE Status	Level 1 Contributor — EME
CSD Registered	Yes
Province	KwaZulu-Natal
Website	www.proaxissolutions.co.za
Email	info@proaxissolutions.co.za [UPDATE once active]
Director	Bongumusa Mthembu [VERIFY: confirm full legal name against CIPC records]

WHAT WE DO

Proaxis Solutions is a South African **technology, software engineering, and AI automation company**. We design, build, and deploy digital solutions that help organisations automate operations, improve service delivery, and achieve measurable business outcomes.

We work across three core capability areas:

1. SOFTWARE ENGINEERING

We build custom software that solves real operational problems — from internal workflow systems and business applications to web platforms and integration solutions.

Capabilities: - Custom software development (web applications, business systems, workflow platforms) - API development and system integration - Web application

development - Corporate and business website development - Client portal development - Platform modernisation

Suited for: Organisations that have outgrown spreadsheets and manual processes, or need to replace legacy systems with modern, scalable digital platforms.

2. AI AUTOMATION

We design and implement AI-powered systems that eliminate repetitive manual work, improve decision-making, and create operational efficiency.

Capabilities: - AI workflow automation - Intelligent document processing and extraction - AI assistant development and integration - Automated reporting and data processing - Decision-support system design - Business process automation (BPA)

Suited for: Organisations with high-volume, rules-based processes that are currently performed manually, and those seeking to leverage AI to improve quality and reduce operational cost.

Our approach to responsible AI: Every AI solution we design includes a human-in-the-loop mechanism for decisions with significant consequences. We do not design or recommend fully automated decision systems that operate without human review where personal or significant business outcomes are involved. This is embedded in our design practice and in our client contracts.

3. DIGITAL TRANSFORMATION

We help organisations plan and execute the transition from legacy, manual, or fragmented operations to integrated, digital, and data-driven business models.

Capabilities: - Digital transformation strategy and roadmap development - Technology assessment and gap analysis - Process mapping and optimisation - Digital infrastructure advisory - Change management support - Project management and delivery oversight

Suited for: Organisations at any stage of digital maturity — from businesses digitising for the first time to those modernising existing systems.

DELIVERY APPROACH

Phase	What We Do
Discovery	Understand your operations, objectives, pain points, and constraints before proposing anything
Proposal	Deliver a clear scope, timeline, and fixed-price quotation — no surprises

Development	Build iteratively with regular progress updates and client involvement throughout
Delivery	Test thoroughly, train your team, and ensure smooth handover
Support	Provide post-delivery maintenance and support based on your chosen service plan

We apply structured project management discipline to every engagement — regardless of project size.

KEY DIFFERENTIATORS

Factor	Detail
B-BBEE Level 1	Maximum preference points (20/20) on all tenders under R50 million
Business-first thinking	We understand your operations before recommending technology
Senior-level delivery	Every client engagement receives direct, experienced attention
Compliance embedded	POPIA, data governance, and responsible AI are built in — not added later
Honest scoping	We only commit to what we can deliver. We do not overstate capability or experience
Transparent pricing	Fixed-price engagements with clear scope and milestones

COMPLIANCE CREDENTIALS

Credential
CIPC Registered
SARS Registered
B-BBEE Level 1 EME
Information Officer
CSD Registered
POPIA Compliant
PAIA Compliant

TARGET SECTORS

Sector	Our Relevant Capabilities
--------	---------------------------

Government Departments	Software development, AI automation, digital transformation, project management
Municipalities	Process automation, citizen-facing digital platforms, workflow systems
Healthcare	Clinical workflow automation, patient portal development, administrative digitisation
SMEs and Growth Businesses	Full service portfolio — custom software, websites, automation, IT support
Professional Services	Workflow automation, client management systems, document processing
Private Enterprise	Digital transformation consulting, custom platform development, AI automation

RECOMMENDED COMMODITY CODES (UNSPSC)

For use in CSD and tender submissions [VERIFY: current UNSPSC taxonomy]:

Code

81111500
81111600
81111700
81112000
81112100
43232600
