WHO WE ARE

Proaxis Solutions (Pty) Ltd is a South African technology company specialising in **software engineering, artificial intelligence automation, and digital transformation**.

Established in 2025 and headquartered in KwaZulu-Natal, we design, develop, and deploy intelligent digital solutions that help organisations operate more efficiently, make smarter decisions, and grow with confidence.

We serve both private sector and public sector clients — from small and medium enterprises seeking to modernise their operations, to professional services firms, healthcare organisations, and government entities pursuing digital transformation objectives.

Our approach is business-first. Before recommending any technology, we invest time understanding how our clients' organisations actually work. Every solution we build is designed to solve real operational problems and deliver measurable outcomes — not to showcase technology for its own sake.

POSITIONING

Proaxis Solutions is not a generic IT support company or a website agency. We are a **technology, software engineering, and AI automation company** operating at the intersection of software development, intelligent automation, and digital transformation.

We build systems that: - Automate manual, repetitive business processes; - Replace fragmented, paper-based, or outdated workflows with integrated digital platforms; - Apply artificial intelligence to improve decision-making and operational efficiency; - Modernise legacy systems without disrupting day-to-day operations.

VISION

To become a nationally recognised technology services provider and a globally competitive AI and automation company delivering transformative digital solutions across industries.

MISSION

To design, develop, and deploy innovative digital technologies that help organisations operate more efficiently, make better decisions, and accelerate growth through software engineering, automation, and digital transformation.

CORE VALUES

Professionalism — We operate with integrity, accountability, and excellence in every engagement.

Innovation — We continuously leverage modern technology to solve real-world challenges.

Compliance — We adhere to all relevant legal, regulatory, and governance requirements — including POPIA, PAIA, and SARS obligations.

Client Success — We measure our success by the measurable value we deliver to our clients, not by the volume of code we write.

Continuous Improvement — We embrace learning, optimisation, and scalability as core business disciplines.

OUR SERVICES

Software Development

We design and build custom software solutions tailored to your organisation's specific operational requirements. From workflow management systems and internal business platforms to client-facing web applications and integration layers, our engineering approach prioritises maintainability, scalability, and fit-for-purpose design.

We deliver: Custom business applications, internal workflow systems, web applications, platform development, API integrations.

Website Development

We build professional, high-performance websites that reflect your brand, communicate your value proposition, and — where appropriate — generate qualified leads or client enquiries.

We deliver: Corporate websites, business websites, landing pages, client portals, responsive web development, website modernisation and rebuilds.

AI Automation

We design and implement AI-powered automation solutions that eliminate manual work, reduce human error, and enable your team to focus on high-value activities. Our AI solutions are built with human oversight by design — we never recommend fully automated systems for decisions that require human judgement.

We deliver: AI-powered workflows, intelligent document processing, AI assistant integration, automated reporting, decision-support systems.

Business Process Automation

We identify inefficiencies in your operational processes and build digital systems to automate them. From approval workflows to client onboarding to reporting processes, we convert manual, time-consuming activities into efficient digital systems.

We deliver: Workflow automation, process digitisation, approval system development, operational automation platforms.

IT Support

We provide practical technology support to help organisations maintain, troubleshoot, and optimise their digital infrastructure.

We deliver: Technology support, system assistance, digital infrastructure guidance, technology advisory.

Project Management

We provide structured project management services to ensure that technology initiatives are delivered on time, within budget, and in alignment with your business objectives.

We deliver: Technology project coordination, digital transformation project management, software delivery oversight, project planning and reporting.

Digital Consulting

We help organisations understand where technology can make the biggest difference — and how to get there. Our consulting approach starts with your business challenge, not a technology product.

We deliver: Digital transformation strategy, technology assessments, process improvement consulting, business technology advisory.

WHO WE SERVE

Small and Medium Enterprises

SMEs that need enterprise-grade technology capabilities at startup-appropriate investment levels. We design solutions that fit your budget and scale with your growth.

Healthcare Organisations

Clinics, medical practices, and healthcare facilities seeking to digitise patient-facing processes, administrative operations, or reporting systems.

Professional Services Firms

Attorneys, accountants, financial advisors, and consultants who need workflow automation, client management systems, or digital infrastructure to serve their clients more efficiently.

Government Departments and Municipalities

Public sector entities pursuing technology modernisation, digital service delivery, or operational automation. Proaxis Solutions is CSD-registered and B-BBEE Level 1 compliant, making us a preferred procurement partner under the 80/20 preference point system.

Growth-Stage Businesses

Businesses that have outgrown their current systems and processes and need to modernise before the operational burden limits further growth.

OUR COMPETITIVE ADVANTAGES

B-BBEE Level 1 — Maximum Procurement Value

Proaxis Solutions is a **B-BBEE Level 1 Contributor and Exempted Micro Enterprise (EME)**. This means clients in the public sector benefit from the maximum 20/20 B-BBEE preference points under the 80/20 procurement system — the highest possible score, regardless of the contract value (up to R50 million). This is a material procurement advantage for government and public sector clients.

B-BBEE compliance is an enabler of our competitiveness. Our core value proposition is technology excellence.

Business-First Approach

We do not start with technology. We start with your business operations, your specific challenges, and your measurable objectives. Technology is the tool — solving your problem is the goal.

Startup Agility, Professional Standards

As a focused, specialised technology company, we apply the discipline and standards of established practice without the overhead of large firms. Clients receive senior-level attention on every engagement.

POPIA and Compliance Ready

Data protection and governance are built into our approach, not added as afterthoughts. This is especially important for regulated sectors — healthcare, financial services, and public sector clients.

COMPLIANCE AND GOVERNANCE
